Windows Print Drive Install

Once the installer is open, select Custom install.

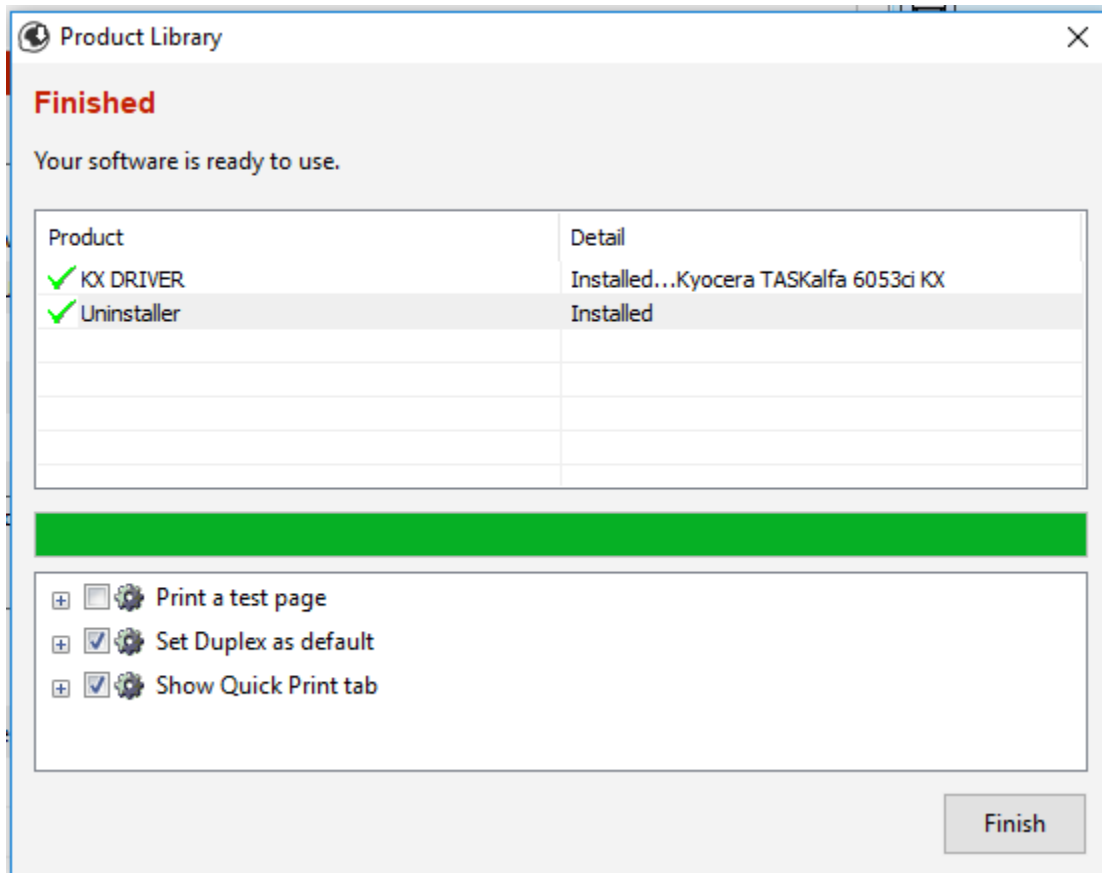

The installer should see the copier on the network, Double click the copier in the upper left pane then double click the driver (**Do Not Use Universal Printing Driver**) in the lower left pane moving them to the right. Then press install.

(Note: Your install window will only show the copier on your network.)

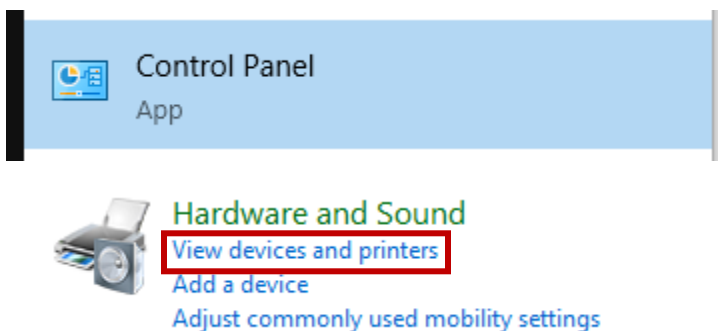

Windows Print Drive Install

You can uncheck the Set duplex as default and show quick print tab. Then select Finish and close the installer.

Open Device and printers from the control panel. (View will vary depending on user preferences)

Windows Print Drive Install

Right click on the device and select Printer Properties
